

Options available to upgrade Level 2

The I-Cliqq Option list is short and unambiguous. This is the shortest route to you having the full system with the full power of all features. You may only require 2-3 options depending on your business model.

***Only Option 2 and 6 are possible for Level 1.**

1- Compose New Font (This feature allows you to create your own pre digitized keyboard fonts)

2-Manage User Profile (This option is for studios that usually have 2-3 digitizers using one system . It allows each to setup their own desktop and saves time and the unnecessary wastage that occurs when each tries to set up their own screen preferences /toolbar layouts/cursor mode etc)

3-Create Sequin/Rhinestone Outline Templates (This feature allows you to export rhinestone templates/sequin templates to cutters, in the event that you set these by hand. Export DXF. You can also export PLT.)

4-Pro Edit (This is an advanced mode of mirror/rotate/resize capability that allows you to perform these operations with extreme ease)

5-Array (Rectangular and Circular array allows you to create brilliant and accurate symmetrical arrangements in a few clicks)

6-Album (This feature allows you to create your own encrypted design CD's. Its great if you want to eg send a user your design catalog that can be viewed, but will require a code from you for the design to be accessed. This way, you can sell someone your design CD very inexpensively, and your customer can purchase your individual catalogued files even a few at a time, as you get paid each time.
